Extraction For Industry

& Education

FUME ARMS

The Fume Arm is easy to manoeuvre in any direction, perfectly balanced, yet robust in construction. The hood is equipped with a damper as standard and the Fume Arm can be used in a wide range of applications, such as;

- Welding → Dust → Sanding
- Soldering → Drilling → Grinding
- Brazing → Fibres → Food Preparation

MINI ARMS

The Mini Extraction Arm is an ideal way of removing a wide range of airborne substances. Weld and solder fumes, dust, vapour and gases are quickly captured at source creating a cleaner and healthier workplace. The Mini Arms may be desk, ceiling or wall mounted.

Utilising different hoods, arms and brackets means that whatever your requirements are, we can supply and install a tailor made system for you.

CANOPY

Canopies can extract fumes or gases from a wide general area, where access is not always possible, eg. CNC cutting table or a robotic welder. They are also ideal above cookers etc. in a school or college environment. Custom made to your individual requirements with a high quality finish.

EXHAUST EXTRACTION SYSTEMS

- Fixed & Flexible Systems
- Retractable Spring Balance Blocks
- Spring Recoil Reel Systems
- Motor Driven Reel Systems
- Rail / Magna Track Systems

KITCHEN CANOPY

EXHAUST EXTRACTION SYSTEMS

Our Exhaust Extraction Systems are designed and installed to the very highest standards, with many years experience in this field, we offer a first class service. From a simple single point system, to the largest multi-point commercial system, all are designed to your exact requirements.

We supply high temperature hoses and have a comprehensive range of both steel and rubber nozzles to fit all types of vehicle.

FILTER BENCH

The Filter Bench works on the principle that any dust or fumes generated by the operator are quickly drawn down through the perforated worktop. The internal filters then clean the air, which can be either returned into the workplace or vented to atmosphere. These units are simple to operate and quick to install.

FUME CUPBOARDS

We can COSHH test and service both fixed and mobile fume cupboards, ensuring full compliance with current COSHH and CLEAPSS regulations and meeting the specific safety requirements of schools and colleges.

WOOD DUST EXTRACTION

Our Wood Dust Extraction Systems offer an ideal way of removing wood waste before it becomes a health issue. Whether it is a single machine or a complete workshop, we design the system individually to meet all of your requirements.

The internal or external self cleaning Vacuum Units keep your system running efficiently and all comply to current ATEX Regulations.

ROOF FANS

A wide range of high performance Roof and Wall Fans supplied fully assembled for fast installation.

The cowls are manufactured in rugged fibre glass which ensures a long life and contains an ultra violet stabiliser to stop the cowl fading in sunlight.

→ Vapours

→ General Ventilation

→ Fumes

We offer full COSHH assessments and servicing facilities to ensure that your system is both efficient and complies to all current COSHH Regulations.

Our experienced COSHH testing engineers cover all of the UK, ready to help and advise.

A comprehensive range of spare parts and accessories are also available including; Rubber and Steel Nozzles, Filters, Hoses, Fans and Couplings.
